

Supplementary Figure 1

Supplementary Figure 1

HBD2 Gene expression in IEC infected by *T. gondii* genotypes Type II (ME49) and Type III (VEG). IEC were cultured in 24-well plates at a density of 3×10^5 cells /well and infected with the three *T. gondii* genotype strains at MOI 5. HBD2 gene expression in infected cells was quantitated by RT PCR. Results were expressed as relative HBD2 gene expression in comparison to non-infected cells.
