

Bannister et al., Supplemental Figure S1 – Sectioned gonads probed for MIR101, MIR193B, and MIR449 expression by WISH.

Whole-mount gonads probed by WISH for miRNA expression using LNA probes were transverse-sectioned. Scale bars all equal 100 μ m. All images shown are 400X magnification except male E6.5 MIR193B and Female E9.5 MIR449 (both 200X).
