

Figure S10

Figure S10: Heterozygous insulin receptor mutants do not show altered adult viability/developmental time

Total eclosion (**A**) and cumulative eclosion rates (**B**) of control (Dahomey) and heterozygous *InR* mutants (*InR^{P5545}/+*, *InR^{GC25}/+* and *InR^{EC34}/+*, all in Dahomey background) are similar when reared on regular (0% ethanol) media.
