

Figure S3

**Figure S3: Ethanol-reared adult flies absorb ethanol normally.** A. Ethanol absorption was measured in extracts from 0 and 5% ethanol-reared adult flies after vaporized ethanol exposures of 0, 5, 15 and 30 minutes (110:40, vaporized ethanol:humidified air). No significant differences in ethanol absorption were detected between control and ethanol-reared animals (N=6).
