

Supplement Figure

Supplement figure. Resistin expression in different tissues from aortic banded hypertrophic hearts. Shown is a representative western blot and expression quantification for resistin isolated from adipose tissue (Adipose), left ventricles (Heart), liver, or lung following AAB. Apart from the adipose tissue, AAB appears to increase resistin expression not only in the heart but also in the liver and lung tissues. The lung is known to contain high levels of resistin, as we already showed before (ref. 24). GAPDH is shown to verify protein loading. * $p < 0.05$; ** $p < 0.01$.
