

Figure S6. The *C. briggsae unc-25* distal promoter confers robustness of expression pattern. Percentage of 200 individuals expressing GFP in indicated number of D-type neurons from a chimeric promoter composed of distal *C. briggsae unc-25* sequence and the *C. briggsae unc-47* proximal promoter (black bars). For comparison, *C. briggsae unc-47* full-length and proximal promoters are shown in black and gray hashed bars, respectively.
