

Supplemental Figure 1. Zhu et al.

Supplementary Figure 1. Ad-LIGHT does not promote lymphocytes proliferation during LN hypertrophy.

WT or HVEM^{-/-} mice were immunized with 5×10^{10} VP of Ad-null or Ad-LIGHT intradermally on the tail base. 3 days later, DLN cells were collected and stained with anti-CD62L and anti-Ki-67. CD62L+Ki-67⁻ cells are defined as naïve non-proliferating cells.
