

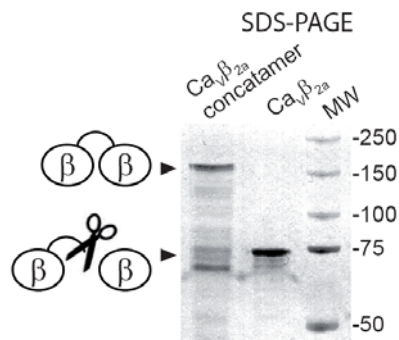

**Figure S3.**

**Fig. S3.** SDS-PAGE of recombinant Ca<sub>v</sub>β<sub>2a</sub> concatamer. Ca<sub>v</sub>β Ca<sub>v</sub>β<sub>2a</sub> concatamer was expressed and purified as previously described for Ca<sub>v</sub>β (1). The expected molecular masses for concatamer and monomer Ca<sub>v</sub>β<sub>2a</sub> are marked with arrows. This multiplicity of bands may be explained by proteolytic digestion of concatamers constructs as reported elsewhere (2).
