

Figure S2

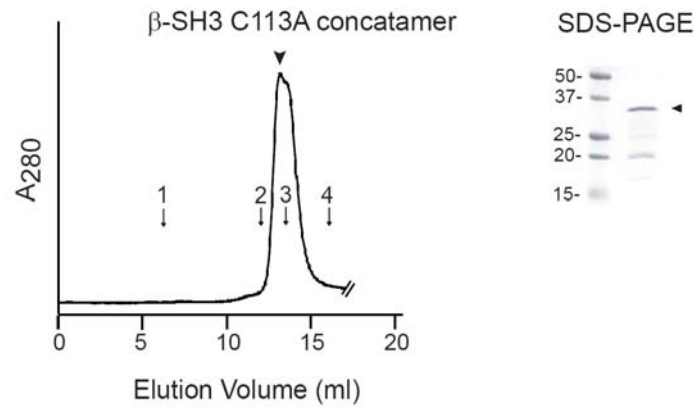

Fig. S2. Size-exclusion chromatography profile from Superdex 200 10/30 column (GE Healthcare Life Sciences) of recombinant β -SH3 C113A concatamer. The corresponding elution volume for β -SH3 concatamer wild-type from Figure 1 in main text is denoted with an arrow. Numbers correspond to the elution volume of: 1, void volume and 2, 3 and 4 to molecular mass standards of Albumin (67 kDa), Ovalbumin (43 kDa), and Ribonuclease A (13.7 kDa), respectively. The inset shows β -SH3 C113A concatamer resolved onto reducing SDS-PAGE.
