

Supplemental Figure 3. Food intake and body weight of *Agtr1a*^{+/+} and *Agtr1a*^{-/-} mice during a high-fat diet

A.

B.

Agtr1a^{+/+} ($n = 13$) and *Agtr1a*^{-/-} ($n = 11$) mice were maintained on a high-fat diet from 6 to 12 weeks of age.

A. Daily food intake of *Agtr1a*^{+/+} and *Agtr1a*^{-/-} mice during the first week after the initiation of high-fat diet.

Data are presented as mean \pm SEM. * $P < 0.05$ versus *Agtr1a*^{+/+} mice.

B. Daily food intake and body weight of *Agtr1a*^{+/+} and *Agtr1a*^{-/-} mice at 12 weeks of age.

Data are presented as mean \pm SEM.
