

Supplemental Figure 5. I.c.v. administered olmesartan has aperitive effect

Daily food intake in wild-type mice 2 weeks after the i.c.v. administration of vehicle ($n = 4$), olmesartan (0.12 mg/kg/day)($n = 5$), and olmesartan (1.2 mg/kg/day)($n = 4$). Data are presented as mean \pm SEM. * $P < 0.05$ versus vehicle.
