

SUPPLEMENTARY FIGURE 1. Addition of the SlyX domain increases secretion of GFP. A, Schematic of the GFP and GFP-SlyX fusion constructs used to analyze the impact of the SlyX on GFP secretion. B, COS7 cells were transfected with wild type GFP, GFP-SlyX. After 48 hours, media were replaced by DMEM without supplements and incubated for 16 hrs. Conditioned media and corresponding cell lysates were subjected to immunoblotting with anti-GFP antibody. The presence of the SlyX domain of IDE strongly increased the secretion of GFP.
