Inhibition of T-cell activation by syndecan-4 is mediated by CD148 through protein tyrosine phosphatase activity

Jin-Sung Chung, Ponciano D. Cruz Jr. and Kiyoshi Ariizumi

Supplemental Figure 1

Supplemental Figure 1. Exclusion of SD-4 from the IS is not induced by unpulsed DC. V5-SD-4- or V5-PD-1-DO11.10 T cells (1×10^6) were co-cultured with unpulsed BM-DC (1×10^6 cells) for 30 min, and then stained fluorescently with anti-V5 (red) and anti-CD3 Ab (green). Images of T cell/DC conjugates were taken and analyzed by phase contrast or confocal microscopy. The location of DC is illustrated by white dashed lines.
