
Supplementary Figure S3. Effect of mutant miRNA mimics on PR protein expression. (**A**) Western analysis of PR expression following treatment with mutant miR-423-5p mimics. (**B**) Quantification of independent experiments measuring PR protein expression after treatment with mutant miR-423-5p mimics. miRNA mimics were added to cells at 25 nM. Error bars indicate s.d. (n = 3). P-values were calculated using the two-tailed unpaired Student's t-test with equal variances. * $P < 0.05$, ** $P < 0.01$.
