Supplementary Table S1

Table S1: Genes which are differentially expressed between *Spor* vs *SalGld*. A total of 742 genes were found to be significant at p<0.001 level using a univariate pairwise test; the genes are listed in ranked order by their parametric p-values. Datasets representing the three time points within each experimental group have been grouped together and were regarded as experimental replicates. Genes whose expression in *Spor* showed >5-fold change in either direction relative to *SalGld* values are indicated in bold.

Supplementary Table S2

Table S2: Functional classification of genes differentially expressed between the *Spor* and *SalGld* groups using KEGG and Biocarta pathways. Gene expression changes were expressed as fold change between *Spor* to *SalGld*, and represent the ratio of the geometric mean intensities of *Spor* to those of *SalGld*. Datasets representing the three time points within each experimental group have been grouped together and were regarded as experimental replicates.
