

**Supplemental Figure 2**. **A**. Insertion of the P<sub>figB</sub>-aadA cassette into hk1 in strains 297 (Bb508 and Bb807) and B31 5A4 NP1 (Bb1197) was confirmed by PCR using primers hk1-KO-5' and hk1-KO-3' (7 + 8). Wild-type 297 genomic DNA (gDNA) was used as a positive control. **B**. Confirming complementation of Bb1197 with a wild-type copy of hk1 contained on a cp9-based Gent<sup>R</sup> plasmid (Bb1363 and Bb1367) by PCR using primers hk1-KO-5' + hk1-KO junc 3' (9 + 8). Wild-type B31 5A4 NP1 genomic DNA (gDNA) was used as a positive control. 1-Kb Plus DNA ladder is shownto the left in both panels.
