

Bäumer et al. Suppl. Fig. S3:

Absence of *Inca1* has no impact on the composition of spleens or antibody concentrations in the plasma.

(A) FACS analysis revealed an unchanged composition of *Inca1*^{-/-} spleens compared to wildtype controls. (B) Determination of antibody concentrations in the plasma of *Inca1*^{+/+} and *Inca1*^{-/-} mice. The concentration of IgA was slightly increased in *Inca1*^{-/-} samples (p=0.039).
