

Supplemental Data Description:

- Page 2: Table 1. Includes sequences and information concerning the HREs used in the creation of the PWM.
- Page 3: Table 2. All of the words that were found to be over-represented in the Cobalt treated group. This table includes all of the sequences and their corresponding binding transcription factor
- Page 4: Table 3. All of the words that were found to be over-represented in the TCDD treated group. This table includes all of the sequences and their corresponding binding transcription factor
- Page 5; Table 4. The integration table of all of the transcription factors identified in Tables 2 and 3 compiled along with expression data. Shading at the top of the column is as follows: Gray expression data, yellow factors over-represented in cobalt treatment and green, factors over-represented following TCDD treatment.
- Pages 6-22 Table 5 Includes probe set, expression data and gene description of all 767 genes whose expression was altered following cobalt treatment as outlined in Figure 1 of the text.
- Pages 23-33 Table 6. Includes probe set, expression data and gene description of all 430 genes whose expression was altered following TCDD treatment as outlined in Figure 1 of the text.
- Pages 34-38 Table 7. Gene ontology information (GO) for the 33 genes listed in table 2 of the paper. Data includes gene ID, abbreviation Unigene cluster number from human database (unigene #). GO number and description of GO category.
- Page 39 Table 8. PWM analysis of the DREs identified in figure 4 of the paper. Each DRE was reanalyzed with the HRE-PWM. Those response elements that scored higher than the lowest HRE (MS Score 0.813) from figure 1 are shaded in yellow.
- Page 40 Table 9. PWM analysis of the HREs identified in figure 4 of the paper. Each HRE was reanalyzed with the DRE-PWM. Those response elements that scored higher than the lowest DRE (MS Score = 0.818) from figure 1 are shaded in yellow.

Suppl. Table 1. Sequences used in the construction of HRE PWM (text Figure 1)
