

Figure. S1

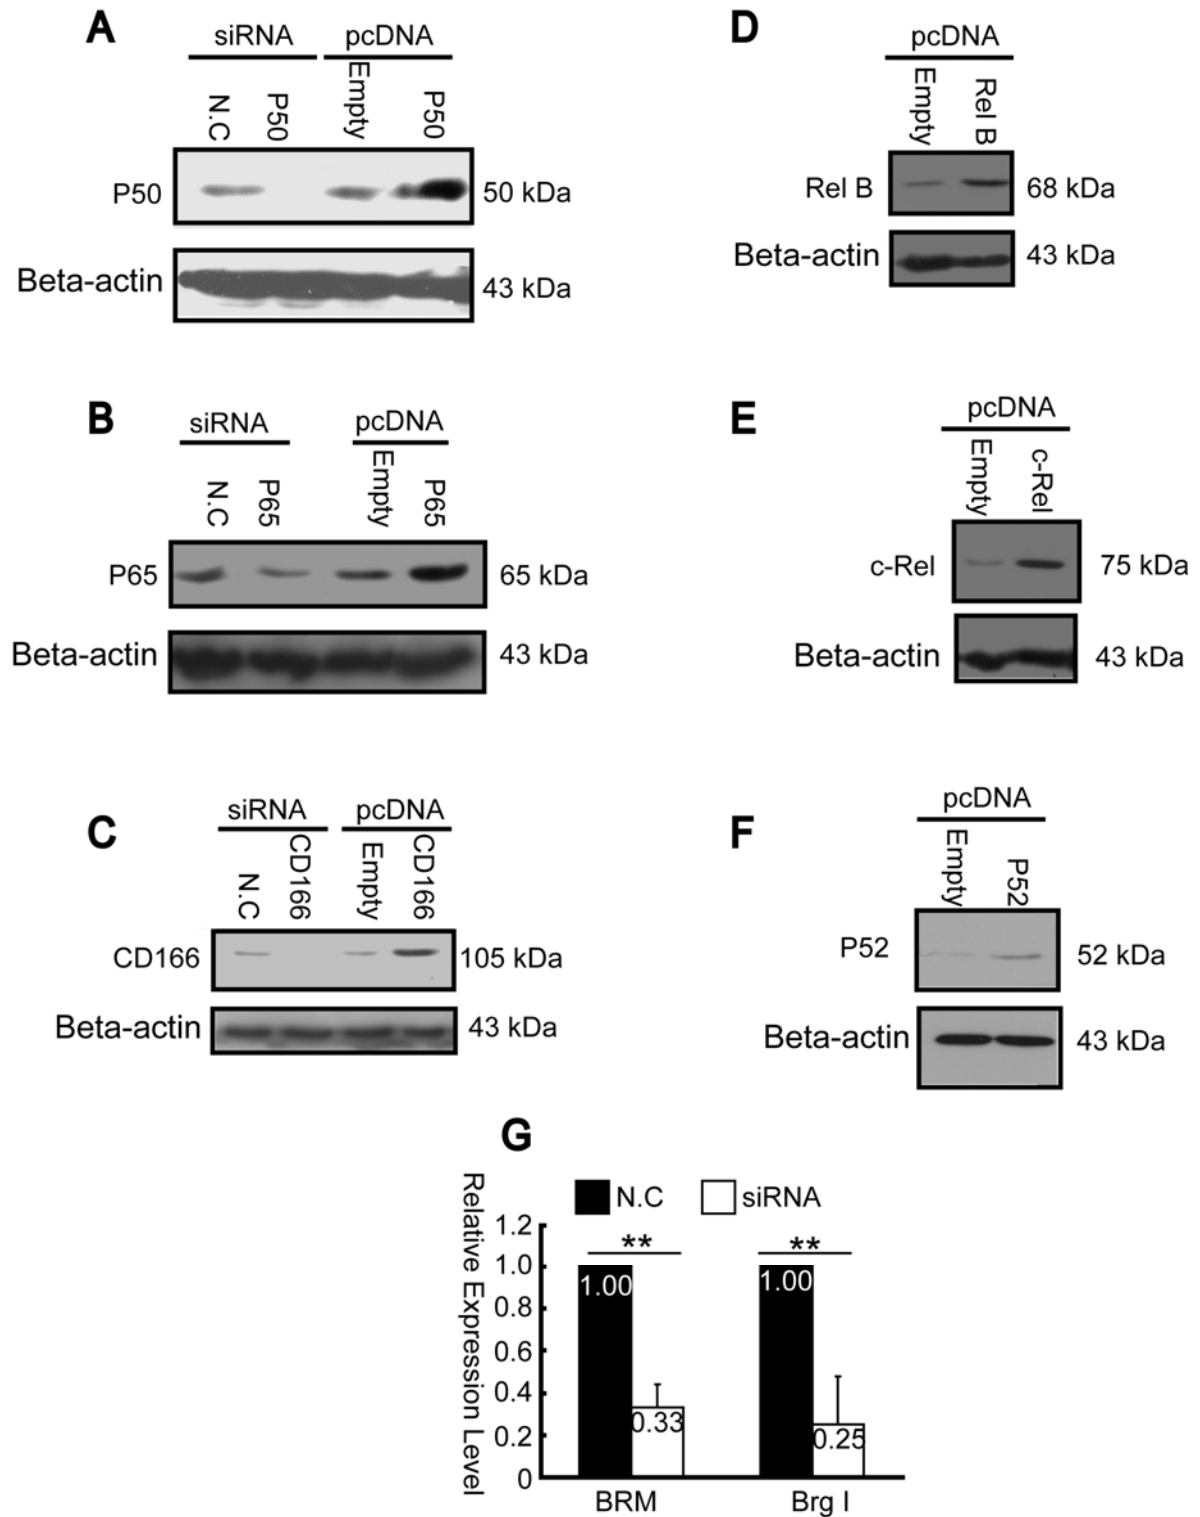

Figure legends to Figure. S1. Certification of siRNA or expression vectors. Deregulations of protein factors were verified by western blotting assay to P50 (A), P65 (B), CD166 (C), Rel B (D), c-Rel (E), and P52 (F). (G) Real-time PCR was performed to verify knockdown effects by specific siRNA against either BRM or Brg I. Beta-actin was treated as an internal control (A-G). The asterisk indicates a significant difference (**, $P < 0.01$).
