

Gómez-González et al.

Supplementary Dataset IV. Whole chromosome data for Rrm3-IP ChIP-chips performed in this study. Rrm3-IP in both wild-type and *hpr1* Δ cells patterns as histogram bars in the y axis show the average signal ratio of loci significantly enriched in the immunoprecipitated fraction along the indicated regions in log₂ scale. The x axis shows chromosomal coordinates. Positions of ARS elements are indicated. The horizontal bars mark the positions of the indicated ORFs.
