

Supplemental Figure 1: Lower relative avidities are detected among non-dominant CD8⁺ T cell responses when compared with RNEU₍₄₂₀₋₄₂₉₎ T cell responses in FVB/N and *neu-N* mice. Representative tetramer stains for both FVB/N and *neu-N* mice corresponding to Figure 4A and C (A) as well as Figure 4B and D (B). Plots are gated on CD8⁺ lymphocytes and show the 1:50 dilution of tetramer (20 μ g/ml).
