

Table S1. List of the rivers which interannual grilse catches were analyzed in this study.

Latitude (N) and longitude (E) give the geographical position of each river mouth. Overall mean \pm SD (kg), and number of observations (years), with the number of missing years between parentheses, are also shown. The last column indicates the first year (yy) in the time series with hydropower development (HP) and/or salmon farming (F). ‘no’ denotes non-presence of that activity for a given river during the studied period.

ID	River	Latitude	Longitude	Mean catch	SD	N	HP / F
1	Glomma	59°12'	10°57'	203.32	77.95	29 (4)	(79, no)
2	Drammenselva ^b	59°44'	10°14'	1697.04	974.21	29 (1)	(79, no)

^aRivers with liming within the studied years.

^bRivers infected with *Gyrodactylus salaris* within any of the studied years.

^cStocking programmes started within the study period.

^dPresence of fish ladders built within the study period.
