

S1. Rotated Varimax Principal Axis Factor Solution for Toddler Behavior Assessment Questionnaire (TBAQ) scales

Scales	Factors		
	<i>Negative Affect</i>	<i>Effortful Control</i>	<i>Fear vs. Pleasure</i>
Anger	.82	-.17	.05
Sadness	.65	.06	.20
Activity Level	.55	-.31	-.14
Soothability	-.45	.06	-.22
Appropriate Attention Allocation	-.19	.89	-.08
Interest	-.07	.80	-.09
Inhibitory Control	-.51	.63	.03
Social Fear	.16	-.01	.74
Pleasure	.13	.21	-.50
Object Fear	.30	.07	.50

Note: N = 2052. Note that while some scales have high secondary factor loadings, this solution is conceptually similar to that found in other temperament studies (see Rothbart, *et al.*, Child Dev, 72: 1394-1408, 2001).
