

Supplementary Figure 4. Recombinant U1 snRNA expression *in vivo*. Mice were injected with AAV vectors as described in Figure 6. Eight weeks post-transduction, total RNA was isolated from four snap-frozen adductor muscles per AAV-shRNA/U1i construct and qPCR was performed with U1- and actin-specific primers. Exogenous U1 snRNA expression was calculated relative to PBS-injected control adductors. AAV-AH expressed shApoB with double H1/H4, AAV-AL expressed shApoB with double L4/L5, AAV-LH expressed shLuc1 with double H1/H4, and AAVLL expressed shLuc1 with double L4/L5. Data are presented as mean (n=4) +SE.
