

Supplementary Figure 1. Tumor-infiltrating CD8⁺ T cells express high level of $\alpha_4\beta_1$ integrin (VLA-4). C57BL/6 mice (5 per group) were challenged with 1×10^5 /mouse of P0 tumor cells. Two weeks later, splenocytes and tumor infiltrating lymphocytes were isolated and the expression of $\alpha_4\beta_1$ integrin (VLA-4) on splenocytes and tumor-infiltrating CD8⁺ T cells was characterized using flow cytometry analysis with antibodies against α_4 and β_1 integrin molecules.
