

Figure S1. Unsupervised cluster analysis of CD4⁺ T_H populations does not segregate FL samples based on diagnosis or previous treatment

Principal component analysis of data set as described in Fig. 5 revealing either the FL patient diagnosis at time of biopsy (A) or previous treatment (B).

Figure S2. Intracellular cytokine data does not cluster based on diagnosis or previous treatment

TH1, TH2, TH17, and THpp cytokine data plotted based on diagnosis (A) or previous treatment (B).
