

Supplemental Figure S4. Uptake of intrathecally administrated rhTPP1 in young mice. Four-week old *Tpp1*^{-/-} mice (n=4) were administered three daily 40 μ L infusions of 10 μ g/ μ L rhTPP1 (Enzyme) and killed 24 hours after the final dose. TPP1 activity in brain was measured and compared to the levels in wild-type animals (WT-adult: wild-type, ~12 weeks old; WT-young: wild-type mice, ~4 weeks old).
