

Supplementary Figure 5 (a, b) Dilution of CFSE and production of IFN γ and IL-4 by wild-type or *Card11^{unm/unm}* cells after culture of sorted naïve CD4⁺ splenocytes under Th0, Th1 or Th2 polarising conditions for five days. **(c)** Dilution of CFSE and production of IL-17 by wild-type or *Card11^{unm/unm}* cells after culture of sorted naïve CD4⁺ splenocytes under Th0 or Th17 polarising conditions for three days. **(d)** Quantitation of the percentage of cytokine-producing cells at the endpoint of the Th1, Th2 or Th17 cultures (3 individual mice per genotype).
