

3. Second round nested PCR for VDJ

4. Second round nested PCR for GL

Supplemental Figure S1. Illustrations of two nested reactions for the single-cell genomic PCR. Step 3: Second round nested PCR with subfamily-specific forward primers reveal the identity of GL and VDJ (3R) sequences amplified in the B cell. Step 4: Second round nested PCR for GL takes place in the inter-segmental regions that are undeleted when not rearranged.
