

SUPPLEMENTAL FIGURE LEGENDS

Figure S1. Controls for protein interaction experiments. Protein pull down assays using the indicated beads and the indicated amounts of His-Hag, GST-CsrA, GST, and FliW proteins. Gels were stained with Coomassie blue. “Input” indicates the starting amount of protein in the assays, “supernatant” indicates the proteins that failed to bind to the beads, and “pellet” indicates the proteins that remained bound to the beads following a series of washes. A) FliW was not retained on the GSH-Sepharose beads when the beads were loaded with GST alone. B) FliW was not retained on untreated GSH-Sepharose beads. Note that a small fraction of the His-Hag protein was retained on untreated GSH-Sepharose beads. C) FliW was poorly retained on untreated Nickel-NTA agarose beads. A large fraction of the GST-CsrA protein alone was retained on untreated Nickel-NTA agarose beads for unknown reasons and this combination of protein and beads was not used in Fig 2.

Figure S2. Phylogenetic tree from figure 6 reproduced at higher magnification.

Supplemental Table S1: Plasmids

Plasmid	Genotype	
pCSB9	P_{T7} -CsrA-H ₆ amp	(Yakhnin et al., 2007)
pDP42	amyE::P _{hag} ^{translational} -lacZ spec	
pDG780	kan amp	(Guérout-Fleury et al., 1995)
pDG1515	tet amp	(Guérout-Fleury et al., 1995)
pDG1728	amyE::lacZ spec amp	(Guérout-Fleury et al., 1996)
pDR111	amyE::P _{hyspank} spec amp	(Ben-Yehuda et al., 2003)
pDR183	lacA::mls amp	(Doan et al., 2005)
pJP4	P_{T7} -His ₆ -Hag amp	
pJP87	$\Omega\Delta$ fliW mls amp	
pKB43	P_{T7} -His ₆ -SUMO-FliG amp	
pKB142	lacA::P _{hag} -hag ^{T209C} mls	
pLC108	amyE::P _{hyspank} -fliW spec	
pLC109	amyE::P _{hyspank} -csrA spec	
pMiniMAD	ori ^{BsTs} mls	(Patrick and Kearns, 2008)
pSG35	$\Omega\Delta$ csrA mls amp	
pSG36	$\Omega\Delta$ fliWcsrA mls amp	
pSM6	P_{T7} -GST-CsrA amp	
pSM12	P_{T7} -His ₆ -SUMO-FliW amp	
pTB146	P_{T7} -His ₆ -SUMO amp	(Bendezu et al., 2009)
