

Supplementary Figure S2

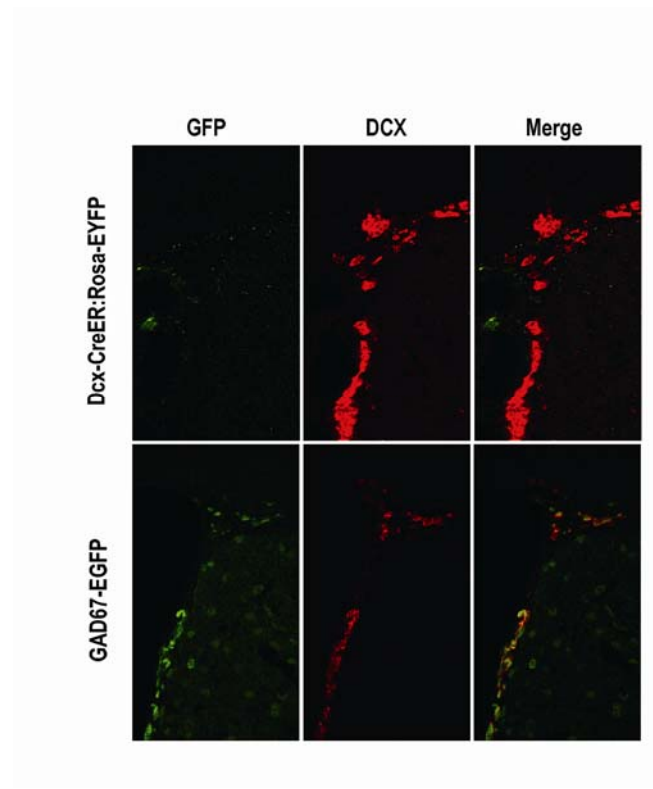

Figure S2 YFP is not expressed in newborn neurons of the subventricular in adult Dcx-CreER:Rosa26-EYFP mice. No YFP (green, upper panels) immuno-labeling was observed in the SVZ, despite the high number of DCX+ neurons in this region (red). A GAD67-EGFP knockin mouse was used as a positive control for anti-GFP immunolabeling of newborn neurons in the SVZ (green, lower panels).
