

Supplemental Figure 3. PSK induces CD25 expression on NK-92 cells, but does not induce IFN- γ production by NK-92 cells. NK-92 cells were stimulated with PBS, PSK (100 $\mu\text{g/ml}$), or PSK (100 $\mu\text{g/ml}$)+IL-12 (1 ng/ml) for 24 hr. The expression of CD25 and IFN- γ was analyzed by FACS. Culture supernatant was collected for IFN- γ measurement by ELISA. All results shown are representative of three independent experiments. *, $p < 0.05$; **, $p < 0.01$; ***, $p < 0.001$ by Student t test.
