

Supplemental Figure 3. In vitro proliferation of human CD4 T cells. A CFSE dilution assay was used to assess CD4 T cell proliferation in vitro, using splenocytes isolated from NSG, NSG-Abo or NSG-Abo DR4 mice as stimulator cells, as described in the Materials and Methods. The data are expressed as the % of CD4 T cells that were CFSE low. \*\*,  $p < 0.01$ .
