

Figure 3. Prevalence of astigmatism (≥ 1.00 diopter (D), Figures 3A and 3B) and high astigmatism (≥ 2.00 D, Figures 3C and 3D) at 4, 5, and 6 years postnatal age as related to the presence or absence of plus disease at the time of the most severe acute-phase retinopathy of prematurity (ROP) in each eye. Numbers above each bar indicate the number of eyes that provided data at each age.
