

**Sup. Table 5:** Correlation between maternal stress during infancy and increased DNA methylation in adolescence in girls only (all CpG sites with FDR <20%). Sites with greater than 5% differential methylation are highlighted in grey.

Gene	CpG Site	Slope	Range	Differential Methylation	Spearman $\rho$	FDR
<u>Girls only</u>						
C5orf21	cg18370979	0.150	0.400	0.107	0.505	0

Note. FDR = false discovery rate (%). Slope = slope of least squared line. Range = range of average beta.
