

Sup. Table 6: Correlation between paternal stress during infancy and decreased DNA methylation in adolescence in girls only (all CpG sites with FDR<20%). Sites with greater than 5% differential methylation are highlighted in grey.

Gene	CpG Site	Slope	Range	Differential Methylation	Spearman ρ	FDR
MGMT	cg14129786	-0.325	0.418	-0.204	-0.520	0
GPR61	cg23749046	-0.053	0.067	-0.034	-0.486	0
CRMP1	cg22680204	-0.037	0.052	-0.023	-0.448	0

Note. FDR = false discovery rate (%). Slope = slope of least squared line. Range = range of average beta.
