

Supplementary Figure 1. **Neither carbenoxolone (CBX) nor probenecid inhibited electrical coupling of *C. elegans* body-wall muscle.** **A**, Sample junctional current traces from control cells and cells treated with either CBX (50 μ M) or probenecid (100 μ M). **B**, Comparisons of junctional conductance (G_j) among the different groups. Shown are mean \pm SE. Data are shown as mean \pm SE. There was no significant difference among the different treatment groups.
