Protein abundance of *Azospirillum lipoferum* 4B and *Azospirillum brasilense* Sp245 as a fraction of the total detected protein. The abundance is displayed for each control and nitrogen fixation replicate. 4 control and 4 nitrogen fixation replicates were produced for 4B. 5 control and 3 nitrogen fixation replicates were produced for Sp245. The data is displayed as (replicate number): (fraction of detected protein). Absent replicates indicate that the protein was not detected during that run. Abundance was calculated as described in Materials and Methods.
