

Figure S1

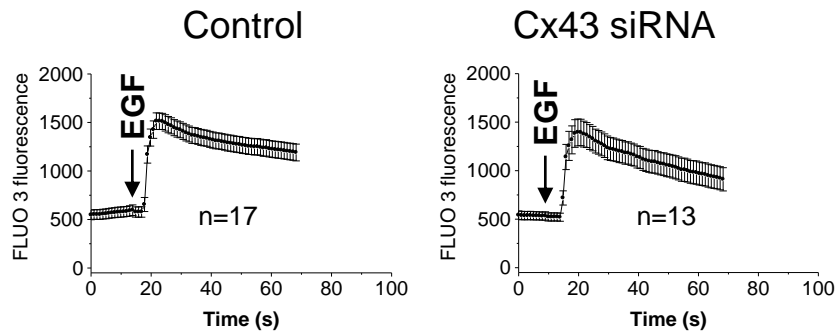

Figure S1. The effect of Cx43 knockdown on epidermal growth factor-induced $[Ca^{2+}]_i$ increase in J774 cells. J774 cells were transfected with control or Cx43 siRNA and incubated with 48 h. After Fluo-3/AM loading, 50 nM EGF was added and Fluo 3 fluorescence was measured. Each line represents mean \pm S.E. of Fluo 3 fluorescence.
