

Figure S2

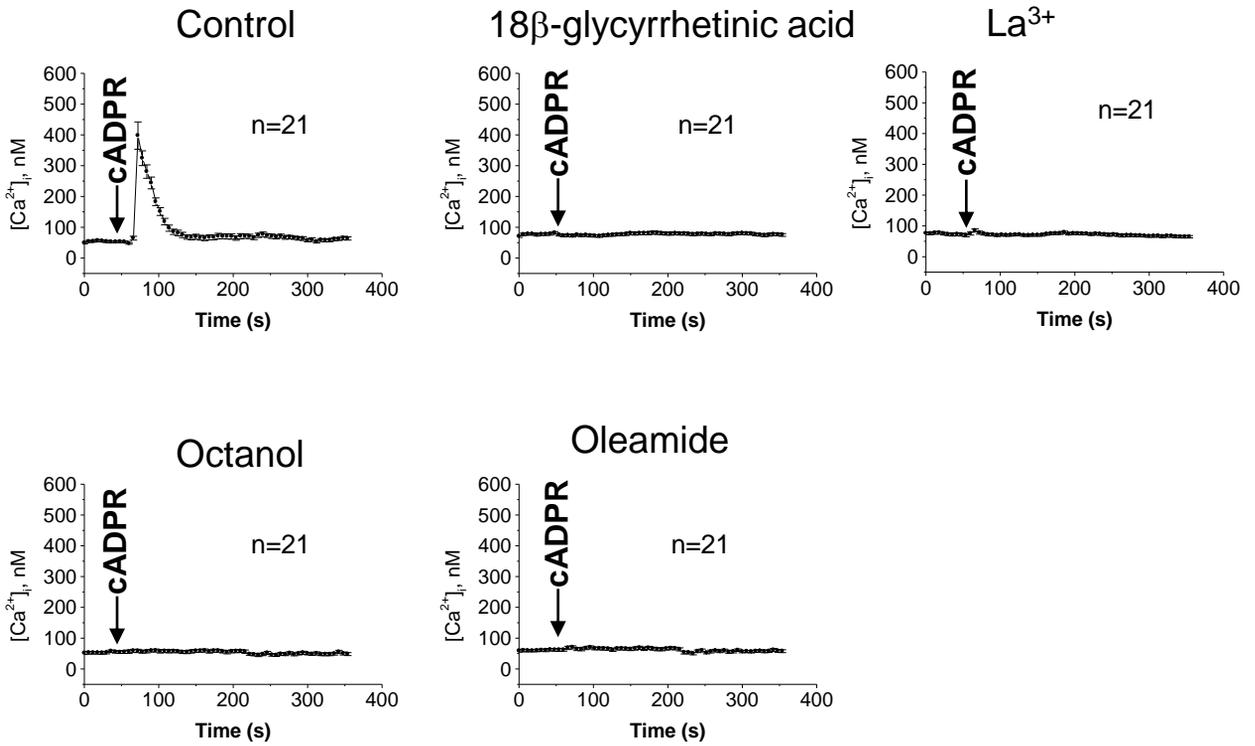

Figure S2. The effect of Cx43 hemichannel blockers on cADPR-induced $[Ca^{2+}]_i$ increase in J774 cells. cADPR was added to Fluo-3/AM-loaded J774 cells that were pretreated with 100 μ M 18 β -glycyrrhetic acid, 1 mM lanthanum chloride, 1 mM octanol and 50 μ M oleamide for 15 min. $[Ca^{2+}]_i$ changes were measured using a confocal microscope. Each line represents mean \pm S.E. of $[Ca^{2+}]_i$.
