

Supplementary figure 1:

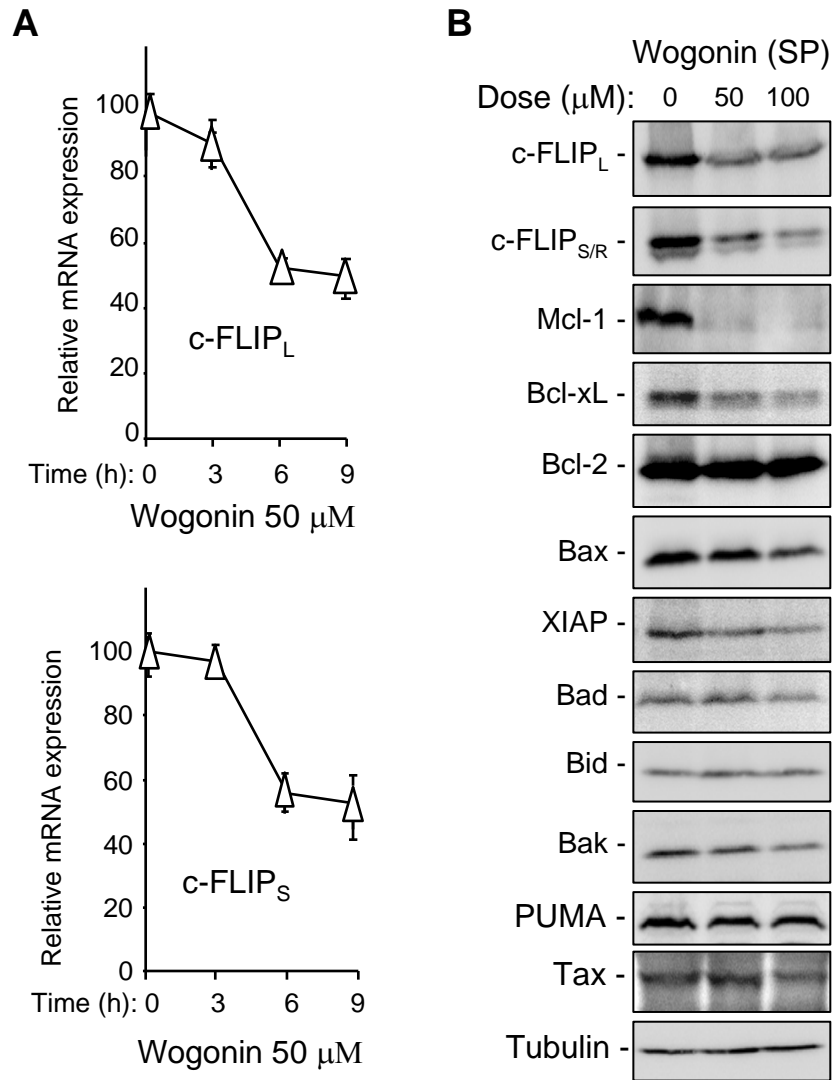

Fig. S1. Wogonin inhibits c-FLIP expression in SP cells.

A. Kinetic analysis of Wogonin-mediated inhibition of c-FLIP mRNA expression. SP cells were treated with 50 μ M of Wogonin for 3 to 9 h as indicated. The c-FLIP_L and c-FLIP_S mRNA expression levels were monitored by quantitative PCR. Data are representative of two independent experiments performed in triplicates. Means \pm SD are shown. B. Wogonin down-regulates c-FLIP protein expression in SP cells. SP cells were treated with different concentrations of Wogonin for 8 h. The protein expression levels of various pro- and anti-apoptotic proteins were analyzed by Western Blot. Tubulin was used to control for equal protein loadings. The results are representative of two independent experiments.
