

## SUPPLEMENTARY TABLES

**Table S1: Perceptions of the probability and seriousness of genetic factors influencing smoking addiction and cessation**

	<i>probability</i>			<i>seriousness</i>		
	<i>(very) small</i>	<i>average</i>	<i>(very) big</i>	<i>(completely) not serious</i>	<i>neutral</i>	<i>(very) serious</i>
...that you have a genetic predisposition as a result of which you will have more difficulty to stop smoking.	38.3%	44.8%	16.8%	10.6%	35.6%	53.9%
...that you have a genetic predisposition as a result of which you have more withdrawal symptoms.	39.4%	45.3%	15.3%	9.4%	39.2%	51.5%

**Table S2: Intention to undergo genetic testing**

	<i>(completely) not interested</i>	<i>undecided</i>	<i>(completely) interested</i>
I am planning to undergo a genetic test to determine which smoking cessation therapy I could use best.	43.5%	40.0%	16.6%
I am planning to undergo a genetic test if my GP would offer it.	29.8%	31.9%	38.3%
I am planning to ask my GP to undergo a genetic test.	50.6%	41.6%	7.8%
