Table S2: Fatty acid composition and content of *B. distachyon* grain.

Top Fatty acid composition and content of *B. distachyon* grain. Lipids from manually dehulled grains were derivatised using 2% H₂SO₄ in methanol, and the fatty acid methyl esters were analysed by gas chromatography – mass spectrography, as described under "Materials and Methods". Data are mol% ± S.E. (n=4).

Bottom Fatty acid composition of total lipids from various cereals.

Supplementary Figures

Figure S1: Multiplanar reconstructions of the embryo

A- Sections at 2 (a), 11 (b), 13 (c) and 16 (d) DAF respectively. e-f: 3D reconstruction of embryo at 11 and 14 DAF respectively. g-h : highlights epidermis differentiation (green), coleorhiza (orange) and root (blue).

B- Three dimensional multiplanar reconstruction (3D MPR) of a 30 DAF embryo within the seed coat. a frontal, b transversal, c saggital.

Figure S2: The *Brachypodium* embryo at 28 DAF. Longitudinal section.

c: coleorhiza, rc: root cap, r: radicle, am: apical meristem, co: coleoptile, c: cotyledon, fl: leaf primordium , s: scutellum

Figure S3: Bright field micrograph of cross-sections from a *B. distachyon* grain at 22 DAF

Ac : aleurone cell, ne : nucellus epidermis, sc : seed coat, se : storage endosperm, va : vascular tissue

Figure S4: Synchrotron UV microspectroscopy (wavelength excitation 275 nm)

A- *B. distachyon* grain cross-section at 17 DAF, visible image (a), fluorescence (290-360nm) image (b), merged image obtained by superposition of the visible and fluorescence images (c). Scale bar: 5 microns

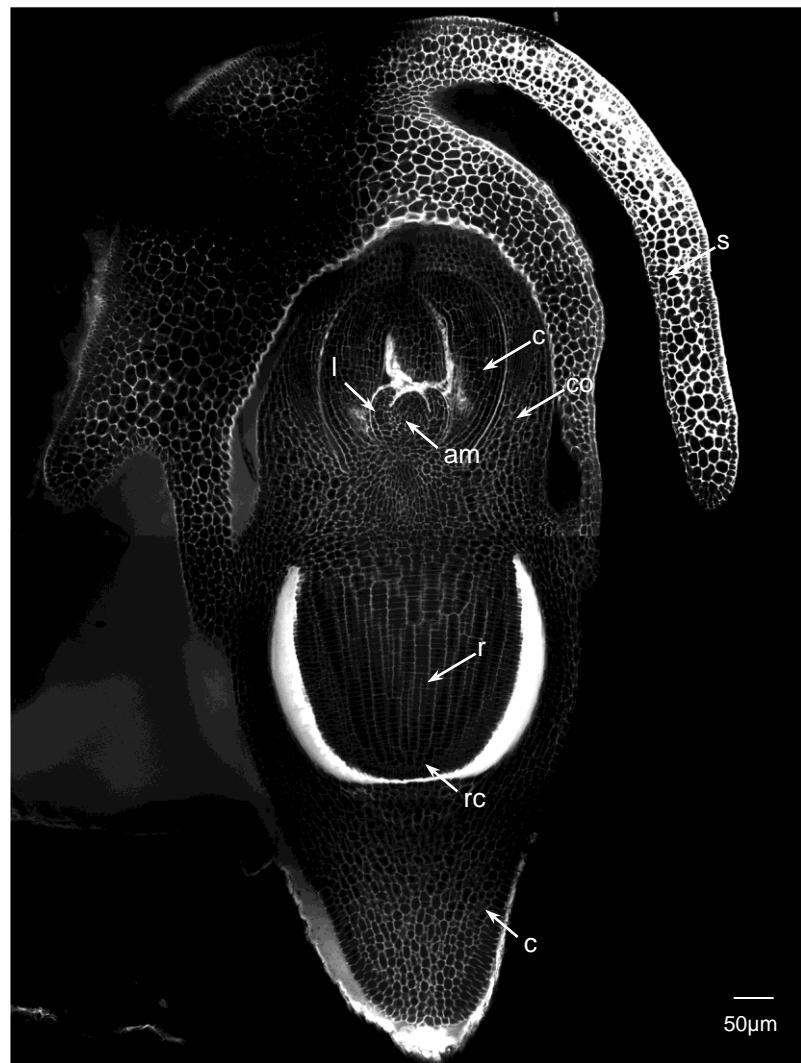

B- Mature grain cross-sections, visible image (a), fluorescence (290-360nm) image (b), merged image(c). Scale bar: 4 microns

C- Fluorescence emission spectrum associated with the pixel +A in the fluorescence image of mature grain cross-sections and spectra of isolated components obtained as Gaussian functions represented with their emission maxima (a) tryrosine, (b) tryptophan (c) esterified ferulic acid.

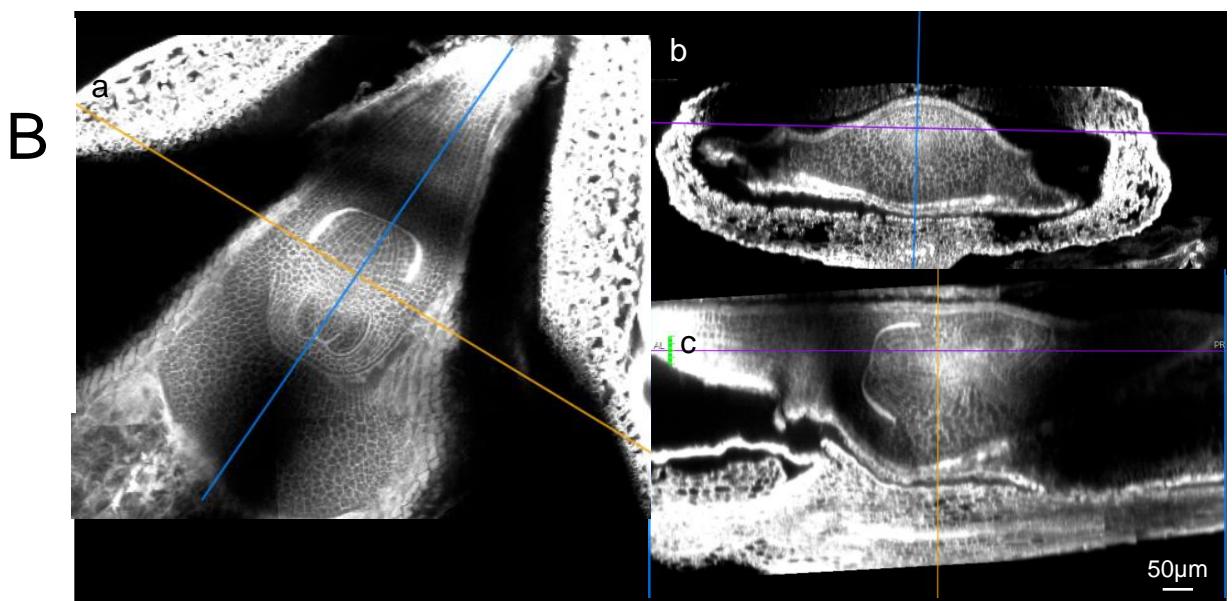

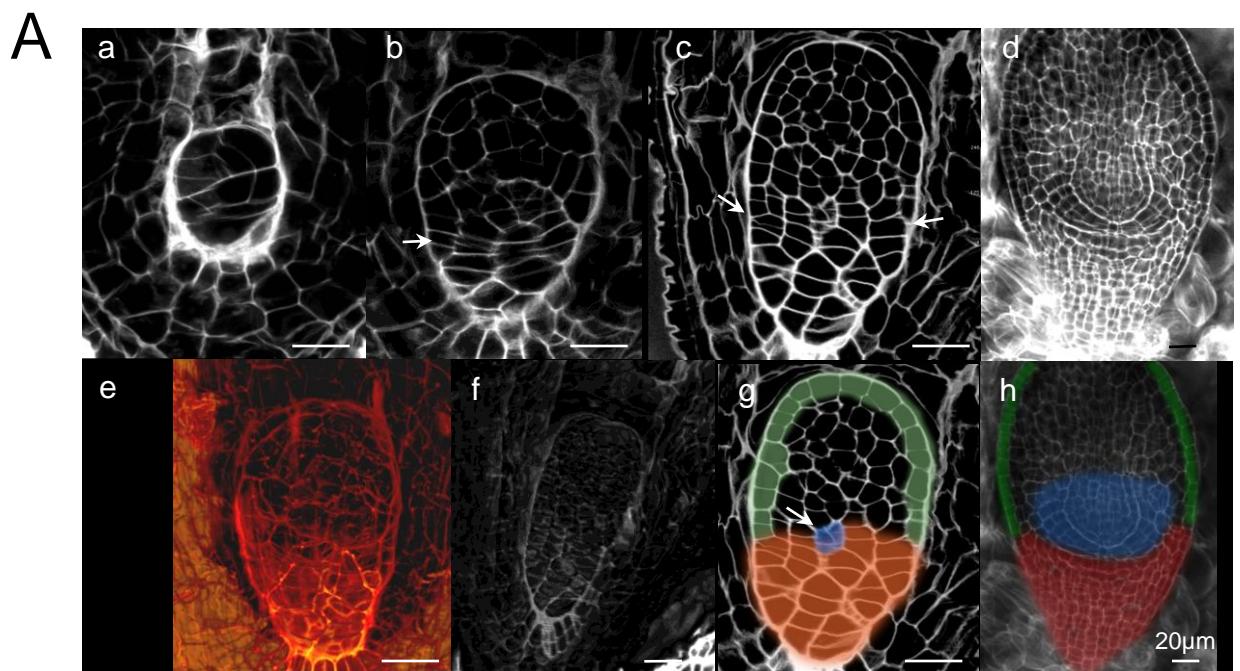

Figure S5: DIC (left panel) and immunofluorescence (right panel) micrographs of grain cross-sections from diverse cereals. Sections were labelled with anti-(1-3)(1-4)- β -glucan.

al aleurone layer, ne nucellus epidermis

Are provided as supplementary data laser scanning microscopy files of 7 stages of embryo development. The files contain full Z stacks through the grain for additional 3D reconstructions or additional observations
