

Insect oral secretions suppress wound-induced responses in *Arabidopsis*.

Floriane Consales, Fabian Schweizer, Matthias Erb, Caroline Gouhier-Darimont, Natacha Bodenhausen, Friederike Bruessow, Islam Sobhy and Philippe Reymond

Supplementary data

Figure S1. HPLC chromatogram of insect OS. OS of *P. brassicae* and *S. littoralis* was analyzed on a reverse-phase C18 column. Standards of known FACs and fatty acids were used to identify putative compounds eluting at the same retention times.

Figure S2. OS suppression of wound-responsive genes does not require an enzymatic activity. (A) Glucose oxidase (GOX) activity from insect OS, visualized by a brown precipitate on glass fiber discs, was detected in *S. littoralis* OS (*S. l.*) and in the positive control GOX, but not in *P. brassicae* OS (*P. b.*). (B) Expression of ERF/AP2 TF was monitored by qPCR after wounding (black bar), after treatment with intact, filtered through a 3kDa filter or boiled *P. brassicae* OS (light grey bars), and after treatment with purified GOX (hatched bar) for 10 h. Untreated plants were used as controls. Values are normalized to the reference gene and are the mean of three technical replicates.

Figure S3. *P. brassicae* and *S. littoralis* OS reduce wound-induced water loss. Leaves were wounded (black bars), treated with *P. brassicae* OS (light grey bars), or treated with *S. littoralis* OS (dark grey bars). Untreated plants were used as controls (white bars). Fresh weight of detached leaves was measured after 4 h. Values (\pm SE) are the mean of 30 leaves. Bars with different letters differ at P -value <0.05 (Tukey's HSD test).

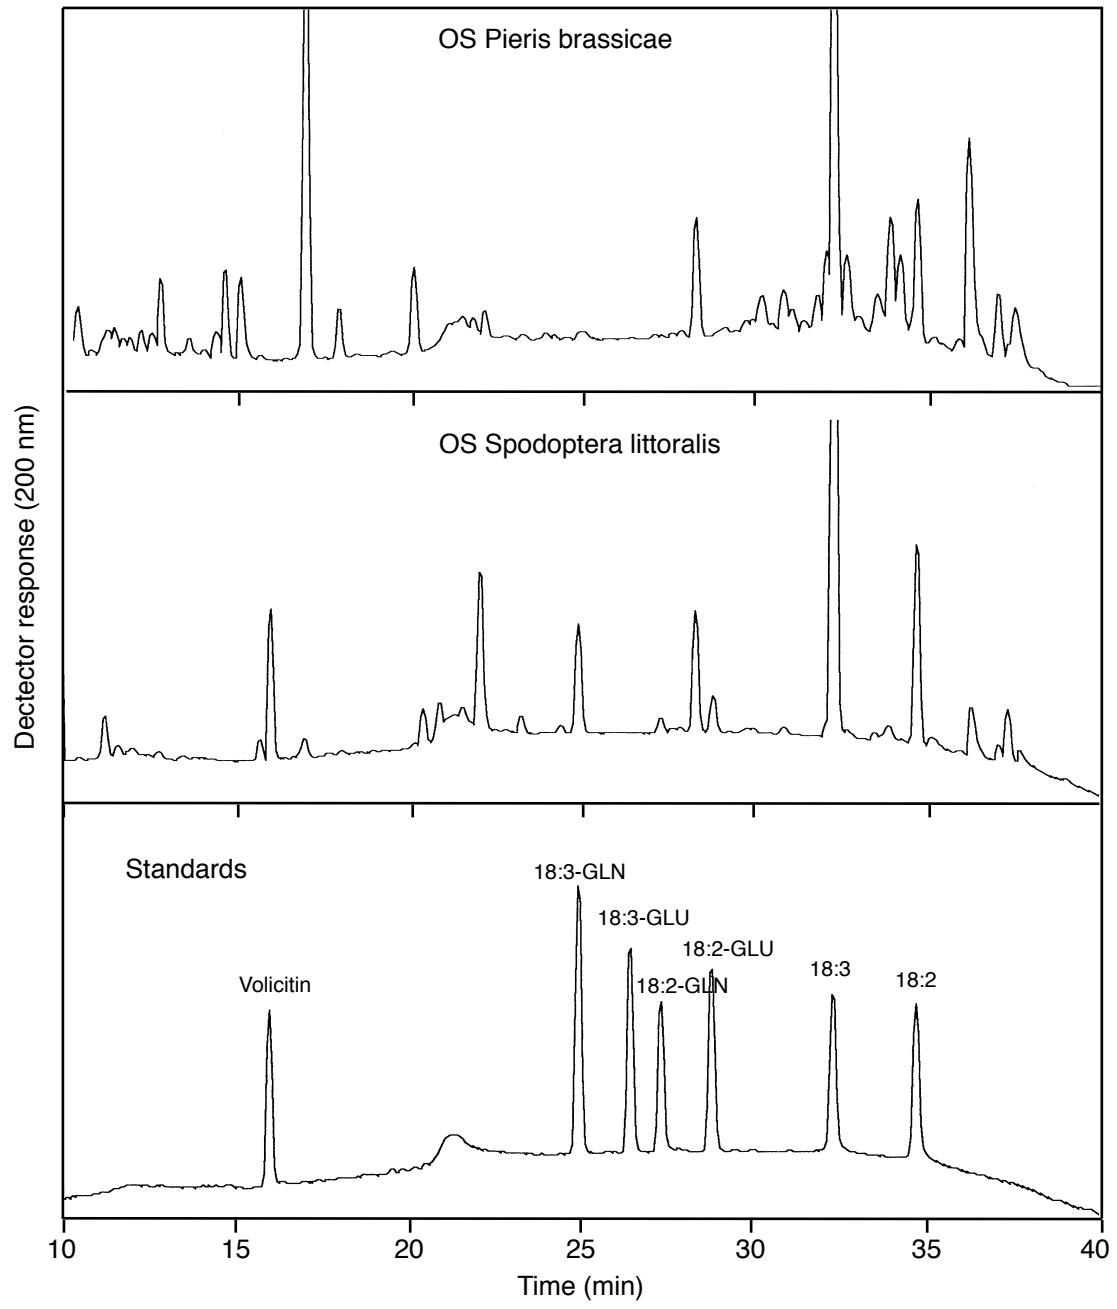

Figure S1

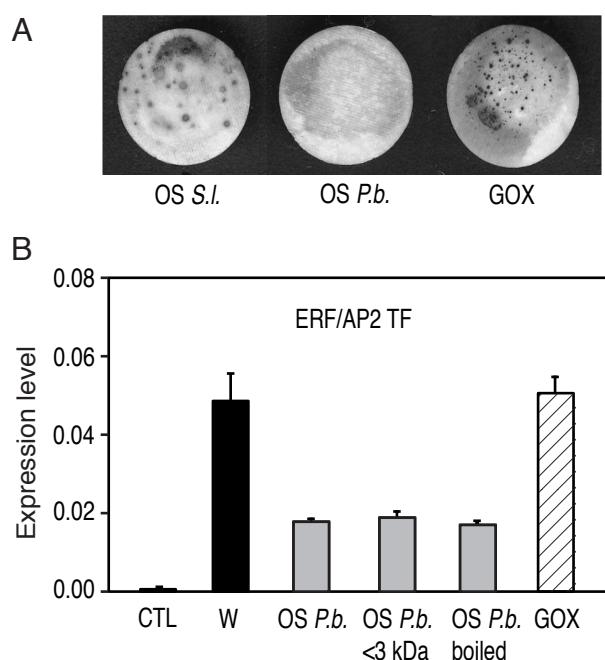

Figure S2

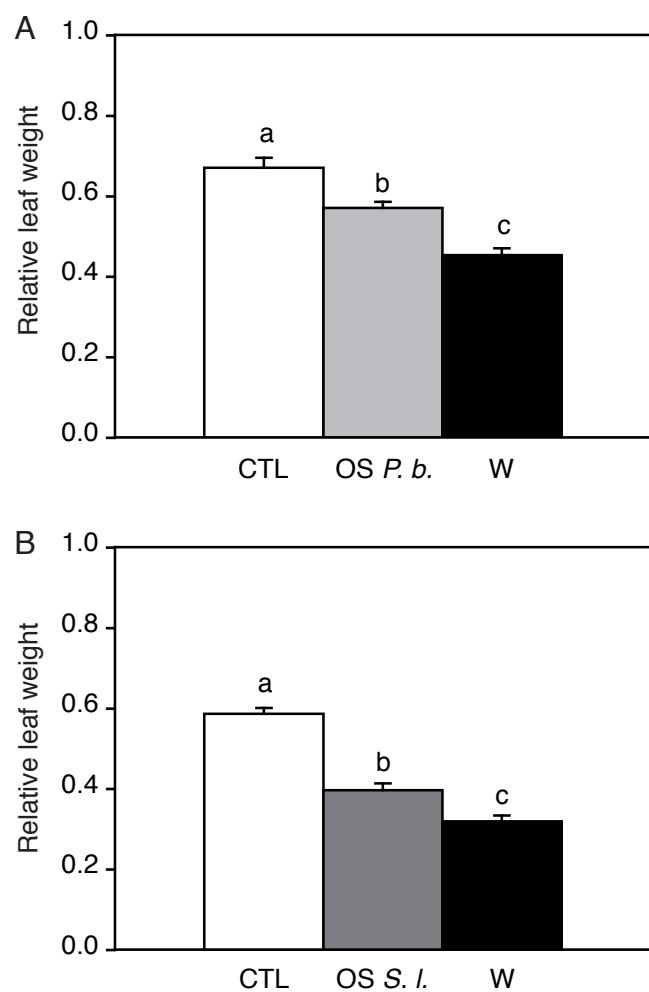

Figure S3

Table S1. List of genes induced by wounding after 6h or 24 h.Leaves were punctured with four 1 mm-holes (wounding). 1 microL of *S. littoralis* OS was applied to the holes (wounding + OS). Untreated plants were used as controls.

RNA samples were hybridized to whole-genome Arabidopsis microarrays. Genes significantly induced by wounding after either 6h or 24h are presented (ratio >1.5, P-value <0.05).

AGI	Description	Treatment 6 h						Treatment 24 h					
		Expression ratio Wounding (n=6)		P-value Wounding (n=3)		Expression ratio Wounding + OS (n=3)		P-value W vs W + OS		Expression ratio Wounding (n=6)		P-value Wounding + OS (n=3)

Table S2. Genes suppressed by *Spodoptera littoralis* oral secretions (OS).

Expression changes in response to wounding or OS treatment were compared to data from a similar experiment comparing insect feeding with wounding. *P*-values refer to the comparison between wounding and OS treatment or between wounding and insect treatment (Student's *t*-test).

^aData from this study. Expression ratios (\pm SE) are the average of six (wounding) and three (OS) independent experiments.

^bData from Reymond et al. 2004 (Plant Cell 16:3132-3147). Expression ratios (\pm SE) are the average of four (wounding) and five (insect feeding) independent experiments. All treatments were done for 3-5 h. NA, gene not present on the microarray.

AGI code	Description	Expression ratio ^a			Expression ratio ^b				
		Wounding	<i>S. littoralis</i> OS	<i>P</i> -value	Wounding	<i>S. littoralis</i>	<i>P</i> -value	<i>P. rapae</i>	<i>P</i> -value
