Movie S1. Immotility of naturally spawned embryos from oiled site sampled in 2008 and normal motility in 2010 repeat samples from the same location. Three video segments first show (A) immotile and opaque embryos within the chorions from oiled site PP in 2008, (B) uncoiled, dechorionated embryos showing lack of touch response, and (C) viable embryos with normal motility within the chorions from site PP in 2010.
