

**Figure S2. Toxicity of fractions issued from flash chromatography.** The toxic effect of fractions F12, F14, F16, F18, F19, F20 were measured at four different dilutions in PBS-DMSO 12%: 1/10, 1/50, 1/100, 1/500. Ten  $\mu$ l were added to each well containing 100  $\mu$ l culture medium. The cells were exposed for 24 hours before measuring the cell viability as described in the Materials and Methods.
