

The American Journal of Human Genetics, Volume 90

Supplemental Data

## Mutations in *KAT6B*, Encoding a Histone

### Acetyltransferase, Cause Genitopatellar Syndrome

Philippe M. Campeau, Jaeseung C. Kim, James T. Lu, Jeremy A. Schwartzentruber, Omar A. Abdul-Rahman, Silke Schlaubitz, David M. Murdock, Ming-Ming Jiang, Edward J. Lammer, Gregory M. Enns, William J. Rhead, Jon Rowland, Stephen P. Robertson, Valérie Cormier-Daire, Matthew N. Bainbridge, Xiang-Jiao Yang, Marie-Claude Gingras, Richard A. Gibbs, David S. Rosenblatt, Jacek Majewski, and Brendan H. Lee

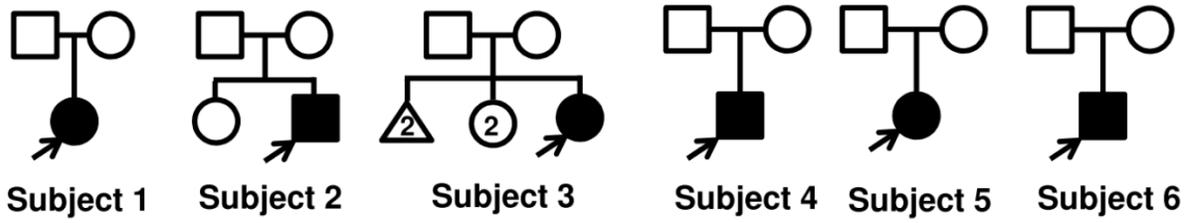

Figure S1. Pedigrees

Pedigrees of the families included in this study.

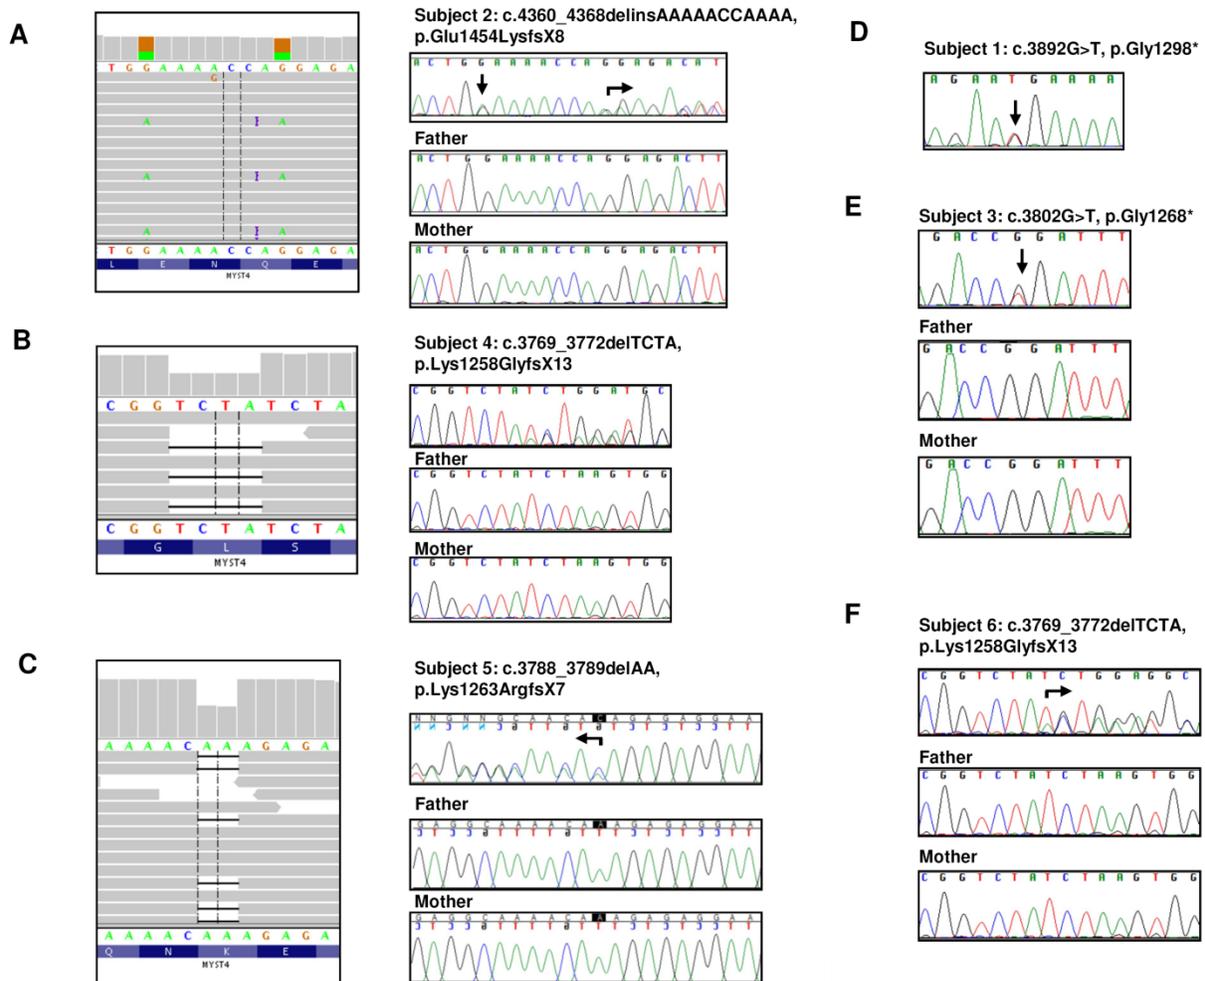

Figure S2. Confirmation of Mutations

*KAT6B* mutations by exome sequencing in subjects 2 (A), 4 (B), and 5 (C). Confirmations by Sanger sequencing for these three and subjects 1 (D), 3 (E) and 6 (F). Sanger sequencing confirmed all mutations detected by exome sequencing, and in all cases where parental samples were available, the parents did not carry the mutation.

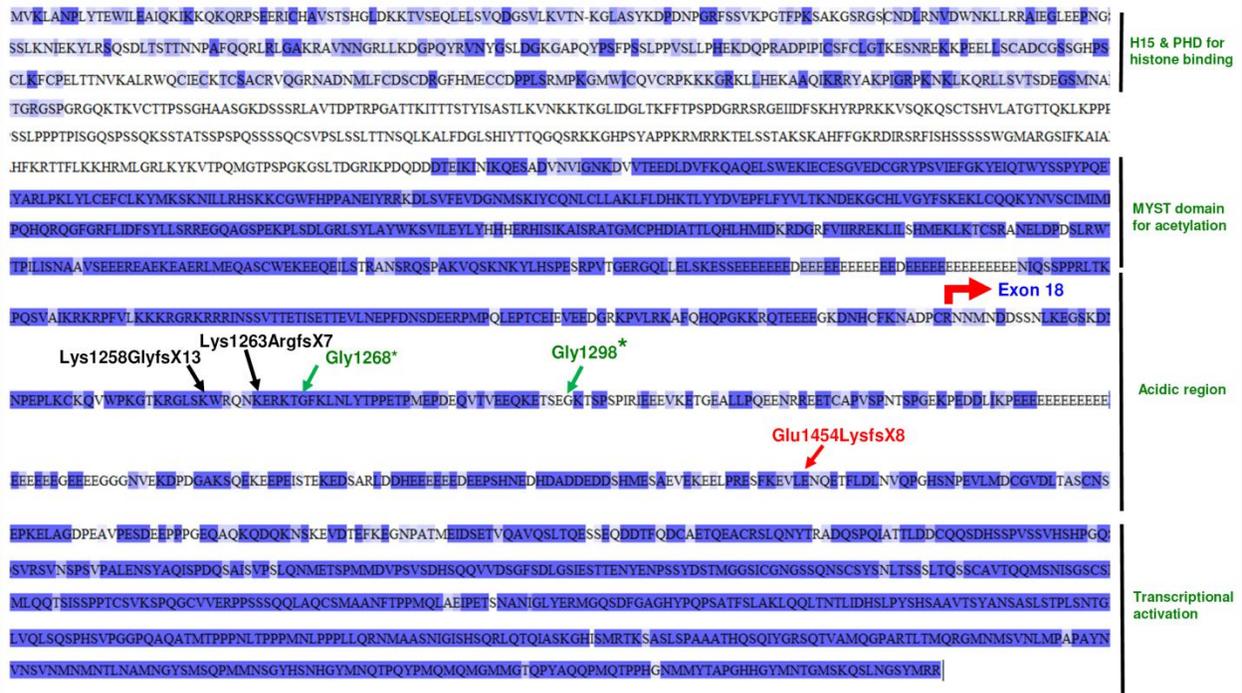

Figure S3. KAT6B Sequence Conservation

The amino acid sequence of human KAT6B (Uniprot Q8WYB5) is shown along with conservation information. The homologues from *Mus musculus* (Q8BRB7), *Bos taurus* (F1MF5), *Macaca fascicularis* (Q8WML3) and *Canis familiaris* (F1PWC5) were aligned to the human protein using JalView. Perfectly conserved residues are shown in dark blue. The mouse isoform in Uniprot does not contain amino acids corresponding to human amino acids 482-668, and the *Bos taurus* and *Macaca fascicularis* isoforms do not contain amino acids corresponding to human amino acids 373-668, which explains the large region between the PHD and MYST domains without conservation. The mutation locations are illustrated with arrows as in Figure 3.

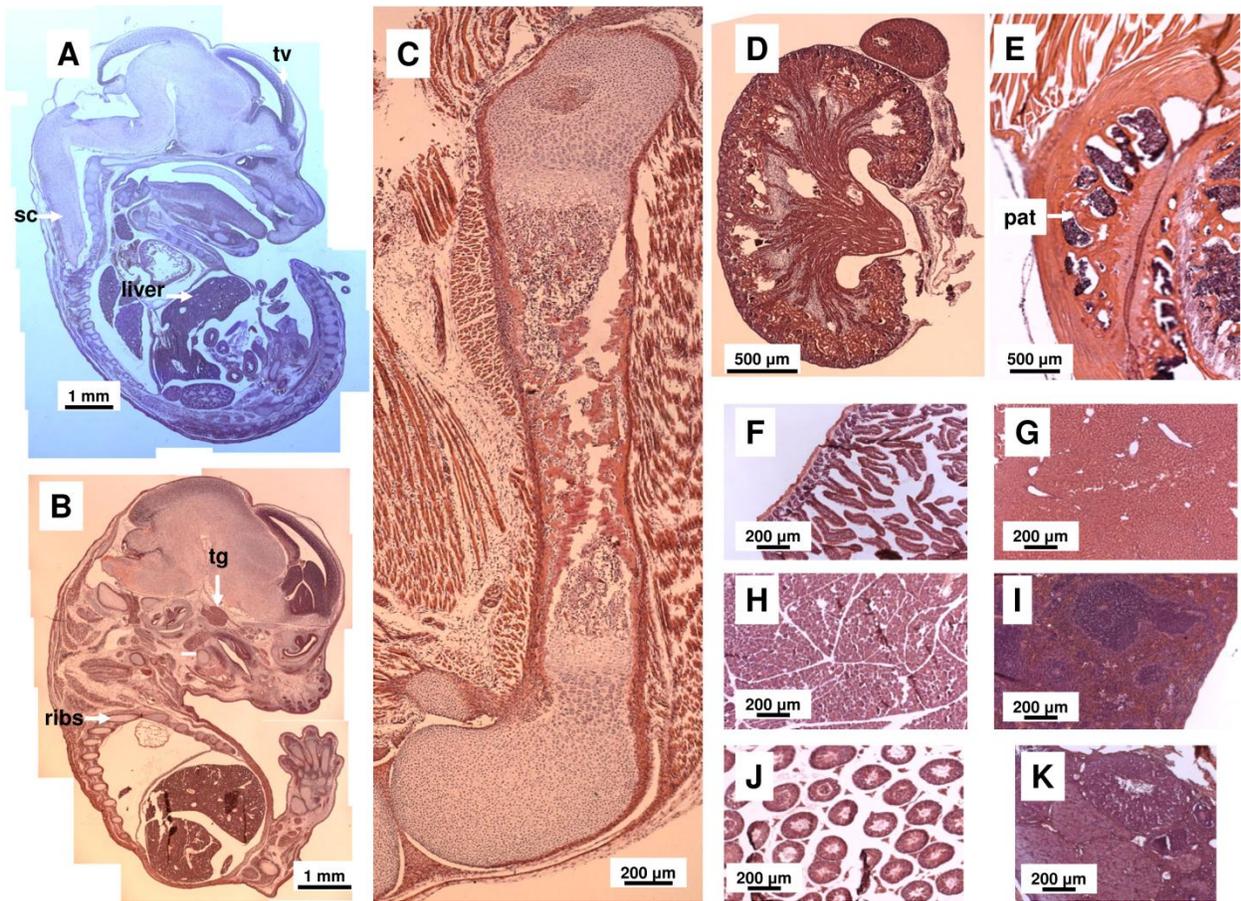

Figure S4. Tissues Corresponding to Figure 5

Haematoxylin and eosin staining of tissues corresponding to the tissues shown in Fig. 5. Tissues shown are: (A and B) whole embryos at E15.5, (C) femur at P1, and (D) kidney at P1. The other tissues are at 8 weeks of age: (E) patella, (F) duodenum, (G) liver, (H) pancreas, (I) spleen, (J) testis, and (K) ovary.

Table S1. Primers Used in This Study

Purpose of primer	Primer name	Sequence
Genomic DNA sequencing	hMYST4ex3_1F	AGTTCTGTAAATACAAAGAGAACCTC
	hMYST4ex3_1R	TCGGCTCCTCAAGTCCTTC
	hMYST4ex3_2F	TTTCCTAAGTCAGCCAAGGG
	hMYST4ex3_2R	CCACATAAACTTAAGTGAAACCG
