

**Supporting Information  
for  
Photo-excitation of adenine cation radical [A•<sup>+</sup>] in the near  
UV-vis region produces sugar radicals in Adenosine and in its  
nucleotides**

**Figure S4**

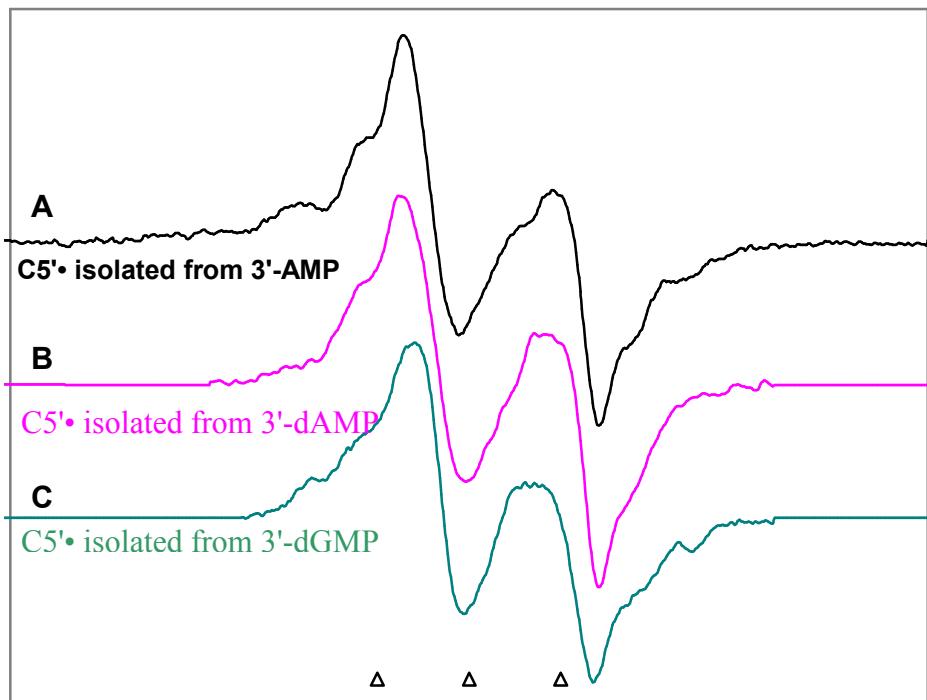

**Figure S5**

**Figure S6**

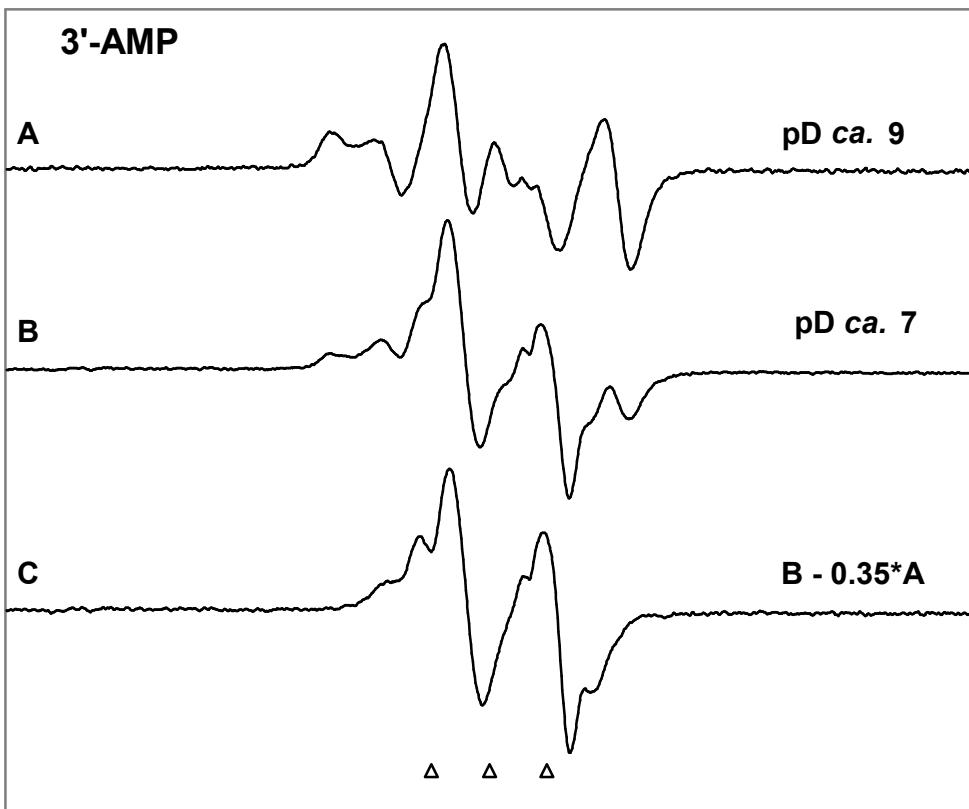

**Table T1**

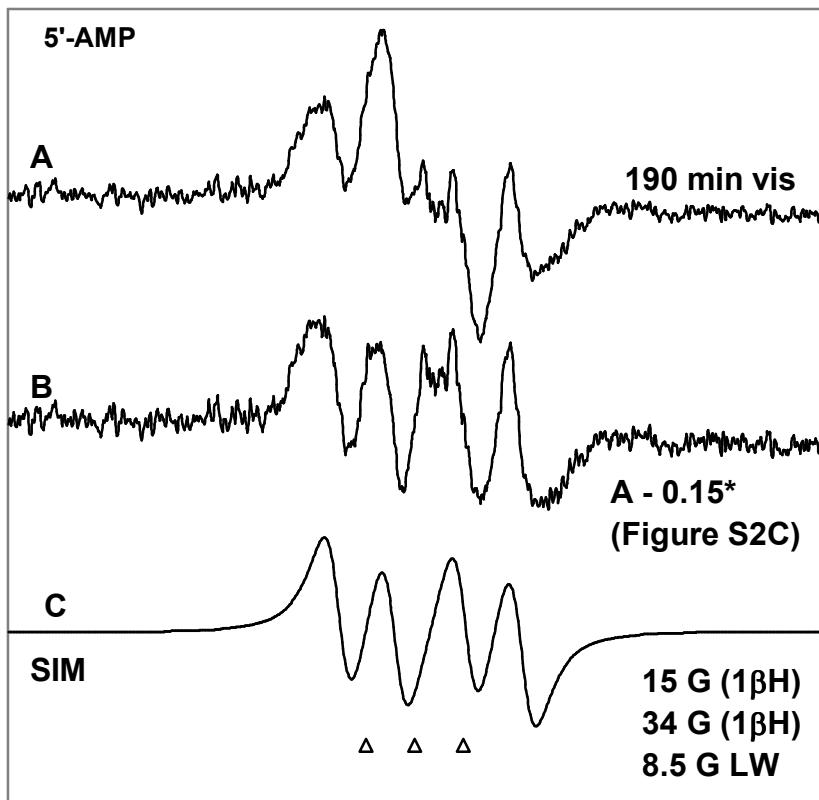

**Figure S1.** Spectra after visible illumination at 143 K of (A)  $\text{A}^{\bullet+}$  in 2'-D-Ado, and (B) of  $\text{G}^{\bullet+}$  in 2'-D-Guo (Ref. 8) in 7.5 M LiCl glass/ $\text{D}_2\text{O}$  in the presence of  $\text{K}_2\text{S}_2\text{O}_8$  as an electron scavenger. The central doublet from  $\text{C}5'\bullet$  is present in both spectra, but the end lines of the quartet belonging to  $\text{C}3'\bullet$  are lost. The three calibration marks are separated by 26.18 G from 1<sup>st</sup> to 3<sup>rd</sup> mark. The center mark is at  $g=2.0056$ .

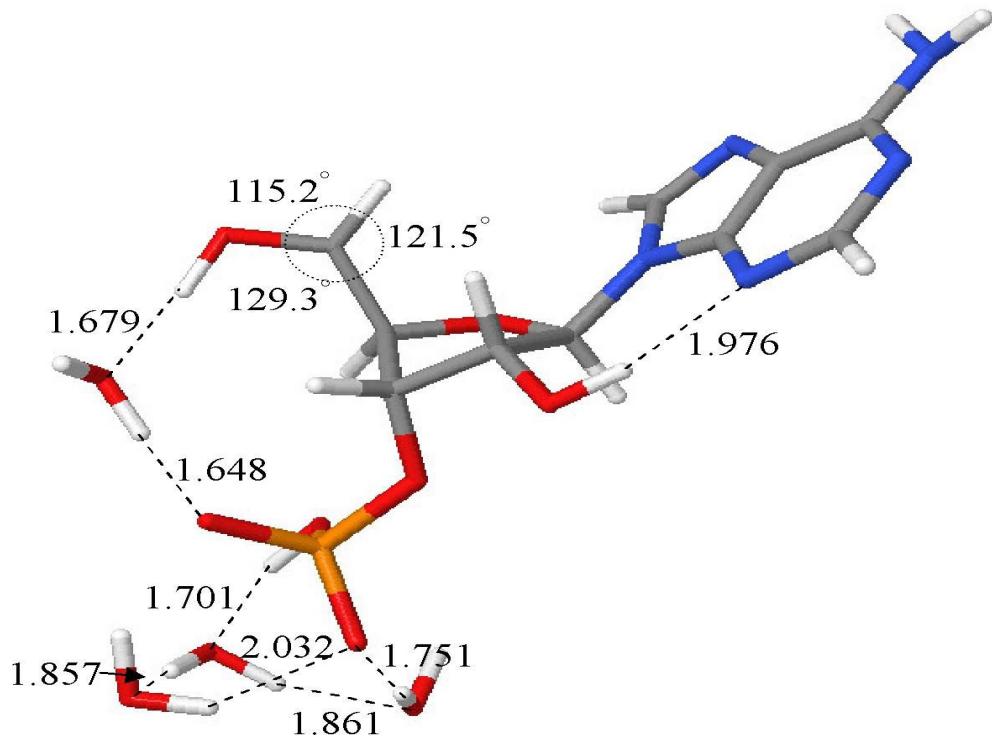

**Figure S2.** ESR spectra of C5'• isolated from RNA- and DNA- nucleotides. Spectrum (A) C5'• formed via photo-excitation of A•<sup>+</sup> in glassy (7.5 M LiCl/D<sub>2</sub>O) sample of 3'-AMP at pD *ca.* 6. Spectra (B) and (C) are the C5'• obtained from glassy (7 M LiCl/D<sub>2</sub>O) samples of 3'-dAMP (Ref. 9) and 3'-dGMP (Ref. 2) respectively. The hyperfine couplings, total hyperfine splitting, line-shape and g-value of all these three spectra are nearly identical.

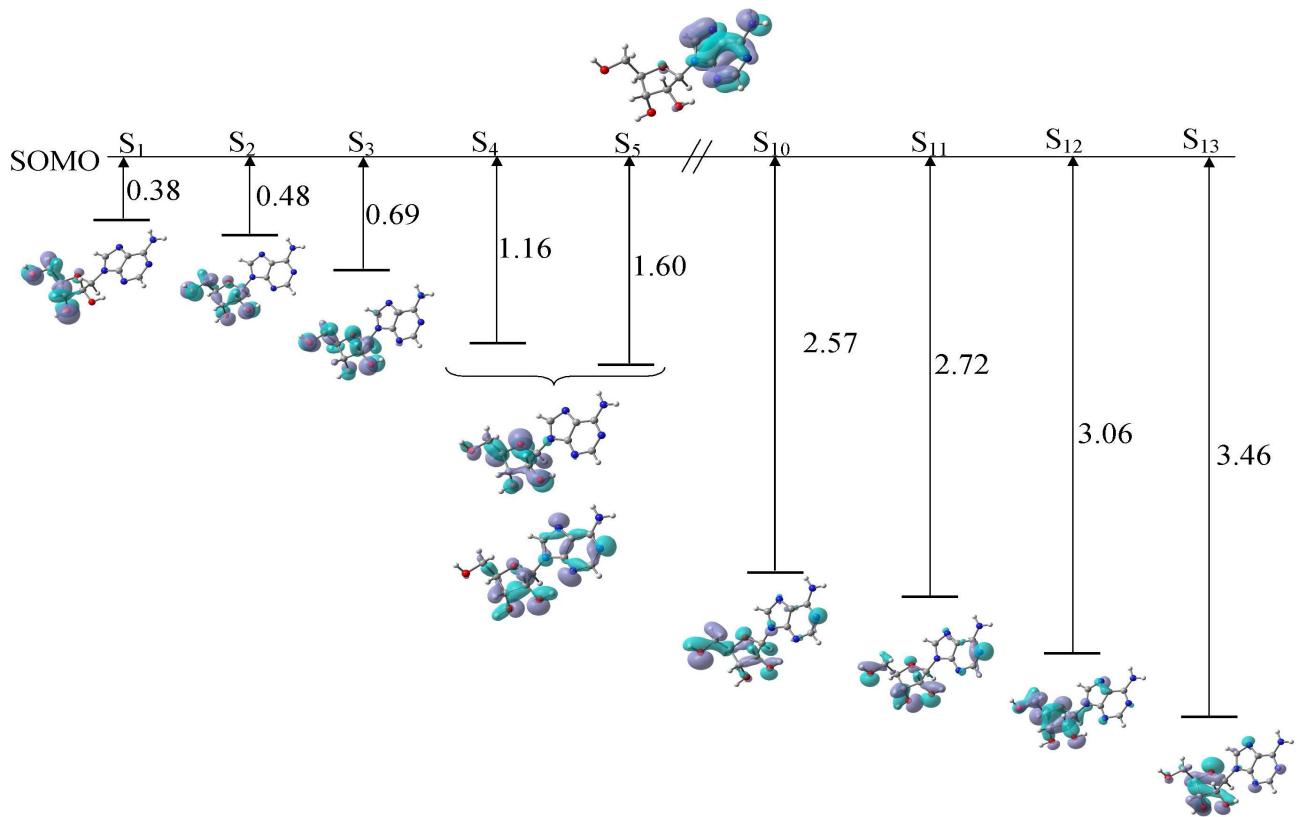

**Figure S3.** Spectrum (A) is the C5'• formed via photo-excitation of one-electron oxidized adenine in glassy (7.5 M LiCl/D<sub>2</sub>O) sample of 3'-AMP at pD *ca.* 9. This spectrum is assigned to C5'• in 3'-AMP with the charge of the phosphate =-2. Spectrum (B) is the C5'• formed via photo-excitation of A<sup>+</sup> in glassy (7.5 M LiCl/D<sub>2</sub>O) sample of 3'-AMP at pD *ca.* 7. Spectrum (C) shows that in spectrum (B) 35% of spectrum (A) is present.

**Figure S4.** Spectrum (A) represents the sugar radical cohort comprising of C3<sup>•</sup> (*ca.* 85%), and C5<sup>•</sup> (*ca.* 15%) found in glassy (7.5 M LiCl/D<sub>2</sub>O) samples of 5'-AMP via photo-excitation of A<sup>•+</sup> followed by subtraction of the remaining *ca.* 13% of the A<sup>•+</sup> spectrum shown in Figure 1A. Spectrum (B) shows the isolation of the quartet owing to careful subtraction of the central doublet (*ca.* 15%) shown in Figure S2C from spectrum A. Spectrum (C) is the isotropic simulation of the quartet with the parameters: 34 G (1βH), 15G (1βH), 8.5G line-width, g(center) = 2.0027.

**Figure S5.** B3LYP/6-31G\* optimized geometries of C5'-radical in  $\text{PO}_4\text{H}^+$  in the presence of 4 waters. The atoms O5', C5', H5', and C4' are constrained in the same plane.

**Figure S6.** TD-B3LYP/6-31G(d) calculated electronic transitions from inner core molecular orbitals to 70  $\beta$  SOMO (singly occupied molecular orbital) in Ado cation radical.

**Table T1**

**TD-DFT 6-31/G(d) Calculation for Adenosine cation radical  
(Structure Optimized at DFT B3LYP 6-31G\*)**

**Method: TD-DFT**

**Basis Set: 6-31G(d)**

**Functionals: B3LYP**

**Transitions: 13**
