

Supplementary information, Figure S4

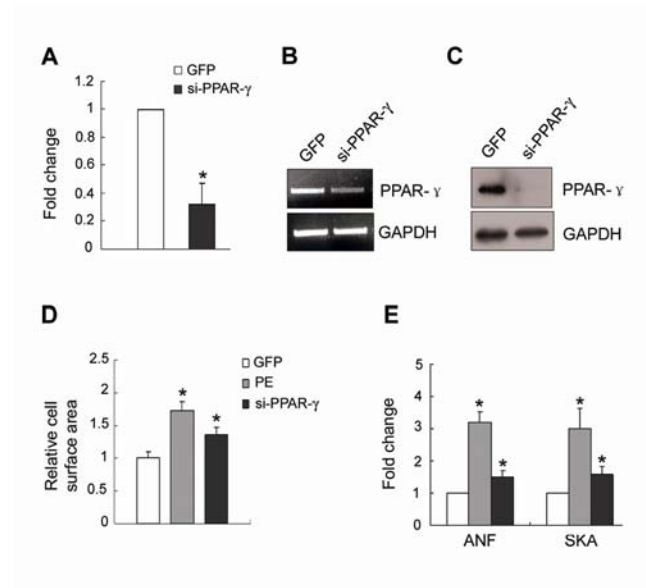

Figure S4 Interference of PPAR- γ in cardiomyocytes induced cell hypertrophy. (A-C) Real-time PCR, RT-PCR and western blot analysis showed that Ad-si-PPAR- γ could downregulate PPAR- γ expression. (D) Fold change in mean cell surface area of cardiomyocytes ($n = 100$ cells per condition). (E) ANF and SKA transcripts were checked by real-time PCR. * $P < 0.05$ relative to respective controls.
