

Supplementary Figure 1. UCP1 immunoreactivity (brown) of positive multilocular adipocytes in the interscapular portion (interscapular BAT) of the anterior subcutaneous depot of C57BL/6J mice maintained at 28°C (A) or 6°C (B) for 10 days. Scale bar for both: 12 μ m.

Supplementary Figure 2. The volume reduction of the C57BL/6J adipose organ (A) corresponds to the white adipocyte volume reduction after cold acclimation (B). Values are mean \pm SEM. * $p < 0.05$.
